

National Park Visitor Analysis

Professional Responsibility:

The script reflects a professional approach to data wrangling but does not explicitly discuss ethical considerations or adherence to standards.

Promotion of Human Values:

The dataset's focus on national parks and possibly World Heritage sites suggests a potential to promote human values related to conservation and cultural heritage.

Fairness and Non-Discrimination:

The operations performed (e.g., filtering for World Heritage sites) do not directly address fairness and non-discrimination. It would be essential to consider how the dataset represents different regions or entities and whether any groups or areas are underrepresented or misrepresented.

Privacy: The script manipulates national park data, which is unlikely to involve direct privacy concerns.**Accountability:** The script sources data from a CSV file and an online JSON.**Safety and Security:** The script does not address safety and security directly.**Human Control of Technology:**

The script automates data processing tasks but does not explicitly mention mechanisms for human oversight or intervention.

Transparency and Explainability:

The script processes data by renaming columns, joining datasets, and filtering.
